

MOTORIZED ROTATIONAL POSITIONERS

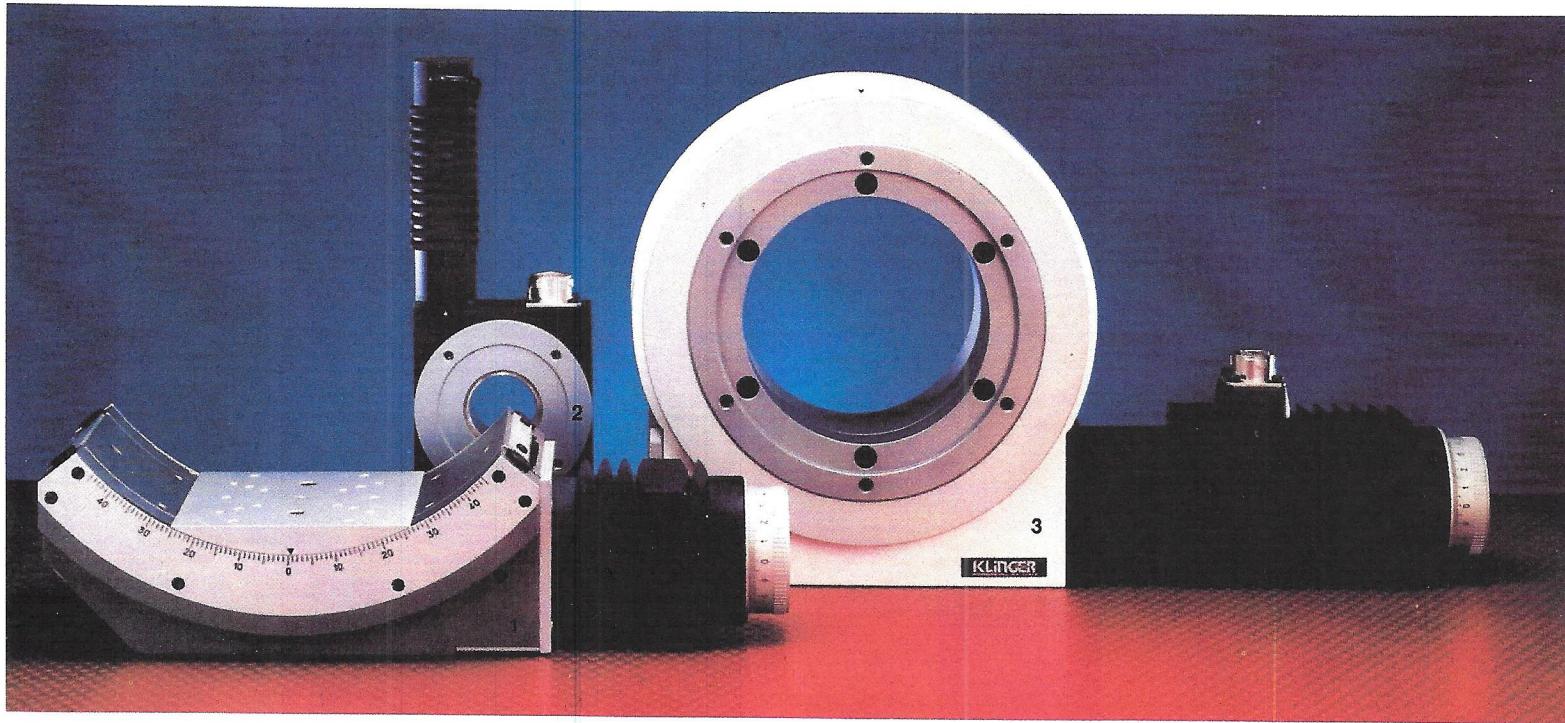

All of the UR, RT, and BG systems can be motorized for remote controlled applications. Preparation for vacuum or other operating environments is available upon request. Motor options include either stepper or DC drive. Other options include encoders for position verification and return to origin circuitry.

2. UR rotation stages

- 2 available sizes
- Wobble: 10 Arc seconds
- Eccentricity: $\leq 2.5 \mu\text{m}$

Type	Res	Load Capacity KgF	\emptyset LxW mm	H mm	Weight kg	Catalog #
UR 80 PP	0.01°	20	80	35	1.13	354 381
UR 80 PP	0.001°	20	80	35	1.13	354 382
UR 100 PP	0.01°	30	105	35	1.63	354 481
UR 100 PP	0.01°	30	105	35	1.63	354 482

Available options include incremental encoder, potentiometer, end of run switch, DC motor drive and origin search.

1. BG goniometric cradles

- Combining 2 BG units of sequential size modules will provide rotation about a common point
- Range: $\pm 45^\circ$
- Selection of 5 available sizes

Model	Res.	Load Capacity KgF	Rotation Axis mm	L mm	W	Weight kg	Catalog #
BG 50 PP 1/100	0.01°	4	15	78	50	1.0	354 533

RT 300 PP 1/1000	0.001°	300	312	92	19.4	354 524
RT 660 PP 1/100	0.01°	500	660	222	95.0	354 526
RT 660 PP 1/1000	0.001°	500	660	222	95.0	354 527

Available options include incremental encoder, potentiometer and origin search.

angular and rotational positioning devices

BG goniometric cradles

The BG type goniometric cradles are unique rotating devices which have their axis of rotation located above the body of the stage. They are designed so that orthogonal mounting of two adjacent size BG cradles will provide two orthogonal axes of rotation about the same external point in space. A third rotation through the same point may be provided by a TR or RT rotation stage mounted underneath to form a system with several degrees of freedom. The travel range on BG type cradles is limited to 90° ($\pm 45^\circ$). When the 45° mounting surface is used, the carriage moves from a horizontal to a vertical position.

BG cradles are available in several sizes with different methods of driving the stage as follows:

- Direct manual drive by knurled knob
- DC motor
- Stepping motor

The command motions are transmitted to the system by means of a worm and gear. Travel is limited by mechanical stops, augmented in motorized systems by limit

switches which cut power to the motor before the carriage reaches its mechanical limit of travel. The position of the carriage is given by an index which is read against a scale marked in 1° increments on the side of the stage. Finer indication of position is available through the following:

- graduated scale engraved on the drive knob (type MS)
- incremental encoder (type GS)

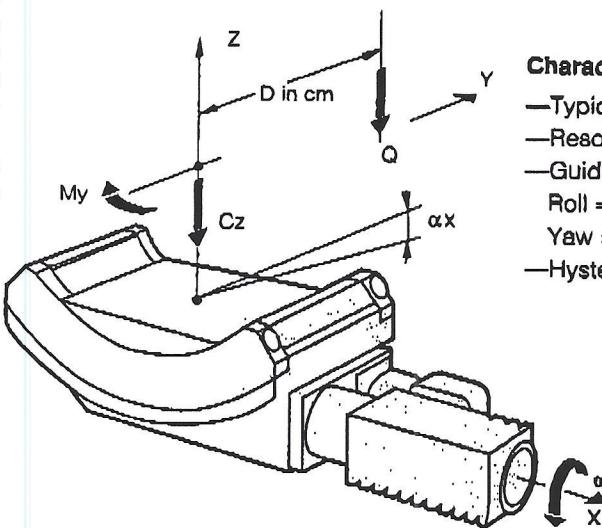

Options

The BG goniometric cradles can be supplied with:

- Encoder: for position information and verification of proper motor operation
- Origin search "homing": allows the stage to be returned to a predetermined home position

Characteristics

- Typical accuracy: 0.05°
- Resolution: 0.01°, 0.005° or 0.001°
- Guide accuracy:
Roll = 10^{-4} rad.
Yaw = 10^{-4} rad.
- Hysteresis $\leq 0.02^\circ$

load capacity

	BG50	BG80	BG120	BG160	BG200
$C = Q \left(1 + \frac{D}{a}\right)$ must be $\leq C_z$, with					
C_z = Nominal load capacity, equivalent to the vertical load capacity	4	12	20	30	50 KgF

angular and rotational positioning devices**BG120 PP and BG120 CCM motorized goniometric cradles**

The BG120 PP and CCM are the stepping motor and DC motor versions of the BG120 cradle. Resolutions of 0.01° and 0.001° are available with various speeds depending on the type of motor selected.

Encoders for position verification (included standard on BG120 CCM)

—Encoder for UE71 PP motor full step resolution

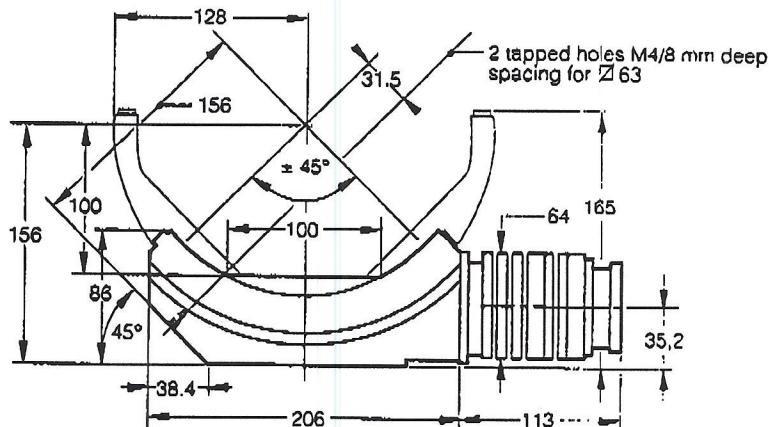

Cat. No. 385 924

—Encoder for UE71 PP motor ministep resolution

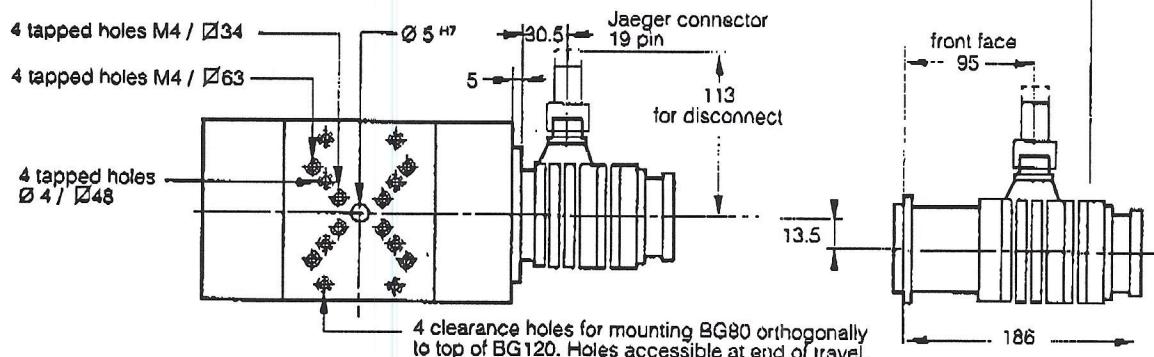

Cat. No. 385 923

Origin search "homing" Cat. No. 385 906

Compatible electronics, see pages 141 to 158.
